                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   "Lipophilin, a novel heterodimeric protein of human tears.";
FEBS Lett. 432:163-167(1998)
-!- FUNCTION: MAY BIND ANDROGENS AND OTHER STEROIDS, MAY ALSO BIND
-:- FUNCTION: A CHEMOTHERAPEUTIC AGENT USED FOR PROSTATE CANCER.
MAY BE UNDER TRANSCRIPTIONAL REGULATION OF STEROID HORMONES.
-!- SUBMULT: HETERODIMER OF A LIPOPHILIN A AND A LIPOPHILIN C
-!- TISSUE SPECIFICITY: Expressed in thymus, trachea, kidney, steroid responsive tissues (prostate, testis, uterus, breast and ovary)
                                                                                                                                       30-MXY-2000 (Rel. 39, Last sequence update)
15-MAR-2004 (Rel. 43, Last sequence update)
Mammaglobin B precursor (Mammaglobin 2) (Lipophilin C) (Lacryglobin)
(Secretoglobin family 2A member 1).
SCGB2A1 OR MGB2 OR UGB3 OR LIPHC.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   and salivary gland.
MASS SPECTROMETRY: MW=8854.94; METHOD=Electrospray; RANGE=19-95.
SIMILARITY: Belongs to the uteroglobin family. Lipophilin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      MEDLINE=98385871; PubMed=9720917;

Biochem. J. 357:673-688 (2001)

-!- FUNCTION: Possible adhesion molecule with a role in early hematopoiesis by mediating attachment to stromal cells. Influences the survival and/or proliferation of B cell precursors. Binding to cells requires Mn(II) (By similarity).
-!- SUBGNIT: Oligomer with STIM1 (By similarity).
-!- SUBCELIULAR LOCATION: Type I membrane protein. Cell surface

Catalyzes the reversible oxidation-reduction of methionine sulfoxide in proteins to methionine (By similarity)
-:- CATALYTIC ACTIVITY: Protein L-methionine + oxidized thioredoxin = protein L-methionine S-oxide + reduced thioredoxin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               (EC 1.8.4.6) (Protein-

Finan Googlete sequence of the 1.683-kb pSymB megaplasmid from the N2-
fixing endosymbiont Sinorhizobium meliloti.";
Proc. Natl. Acad. Sci. U.S.A. 98:9889-9894(2001).
-!- CATALYITC ACTIVITY: (-)-ureidoglycolate + H(2)O = glyoxylate + 2
NH(3) + CO(2).
-!- PATHWAY: Degradation of allantoin (purine catabolism); third step.
-!- SIMILARITY: Belongs to the ureidoglycolate hydrolase family.
                                                                                                                                                                                     Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           pneumoniae.";
Nucleic Acids Res. 24:4420-4449(1996).

-!- FUNCION: IF-3 binds to the 30S ribosomal subunit and shifts the equilibrum between 70S ribosomes and their 50S and 30S subunits in favor of the free subunits, thus enhancing the availability of 30S subunits on which protein synthesis initiation begins.
-!- SUBCELLUIAR LOCATION: Cytoplasmic.

Garber M.B., Liljas A.;
A ribosomal protein from Thermus thermophilus is homologous to a
general shock protein ",
Biochimie 78:915-919(1996).
--- FUNCTION: BINDS TO THE 58 RRNA.
--- SIMILARITY: Belongs to the L25P family of ribosomal proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 .
                                       -i- ENZYME REGULATION: Inhibited by dTTP.
-i- PATHWAY: De novo synthesis of thymidylate.
-i- SUBUNIT: Homohexamer (Probable).
-i- MASS SPECTROMETRY: MW=23619; MW ERR=94; METHOD=MALDI.
-i- MASS SPECTROMETRY: MW=23619; MW ERR=94; METHOD=MALDI.
-i- MISCELLANBOUGS: Optimal pH is 7.5. Retained over 70% of its activity when heated at 90 degrees Celsius for 10 min.
-i- SIMILARITY: Belongs to the dCTP deaminase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                     100.0%; Score 25; DB 1; Length 204; 50.0%; Pred. No. 2.2e+02; ative 4; Mismatches 0; Indels
CATALYTIC ACTIVITY: dCTP + H(2)O = dUTP + NH(3).
CATALYTIC ACTIVITY: dUTP + H(2)O = dUMP + diphosphate.
COFACTOR: Magnesium.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      30-MAY-2000 (Rel. 39, Last sequence update) 10-OCT-2003 (Rel. 42, Last annotation update) 50S ribosomal protein L25 (TL5).

"Structural analysis and activation by fungal infection of a gene encoding a pathogenesis-related protein in potato.";

Mol. Plant Microbe Interact. 3:72-77(1990).

-! CATALYTIC ACTIVITY: Rx + glutathione = HX + R-S-glutathione.

-! INDUCTION: By fungal infection.

-! SIMILARITY: Belongs to the GST superfamily. HSP26 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         .

"Genome-based analysis of virulence genes in a non-biofilm-forming

Staphylococcus epidermidis strain (ATCC 12228).";

Mol. Microbiol. 49:1577-1593(2003).

-!- FUNCTION: Transforms pimelate into pimeloyl-CoA (By similarity).

-!- CATALYTIC ACTIVITY: ATP + 6-carboxyhexanoate + CoA = AMP +

diphosphate + 6-carboxyhexanoyl-CoA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

STRAIN=VC1 / DSM 3638 / ATCC 43587 / JCM 8422;
Welss R.B., Dunn D.M., Robb F.T., Brown J.R.;
"The complete sequence of the Pyrococcus furiosus genome.";
Submitted (FEB-2002) to the EMBL/GenBank/DDBJ databases.
-!- CATALYTIC ACTIVITY: D-ribose 5-phosphate = D-ribulose 5-phosphate.
-!- PATHWAY: Nonoxidative branch of the pentose phosphate pathway.
-!- SIMILARITY: Belongs to the ribose 5-phosphate isomerase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

                                                                                                                                                                                                                                                                                                                                                                                                      -:- CATALYTIC ACTIVITY: D-ribose 5-phosphate = D-ribulose 5-phosphate.
-:- PATHWAY: Nonoxidative branch of the pentose phosphate pathway.
-:- SIMILARITY: Belongs to the ribose 5-phosphate isomerase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Nucleic Acids Res. 16:291-303(1988).
--- FUNCTION: THIS PROTEIN MAY BE AN ATP-DEPENDENT HELICASE AND IS
REQUIRED FOR REPLICATION OF VIRAL DNA.
--- SIMILARITY: TO ORF2 FROM OTHER POTEXVIRUSES AND TO 25 kDa PROTEIN
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Viruses; ssRNA positive-strand viruses, no DNA stage; Flexiviridae;

-!- FUNCTION: Cytochrome c oxidase is the component of the respiratory
-!- FUNCTION: Cytochrome c oxidase is the component of the respiratory
chain that catalyzes the reduction of oxygen to water. Subunits 1-
3 form the functional core of the enzyme complex. Subunit 2
transfers the electrons from cytochrome c via its binuclear copper
A center to the binetallic center of the catalytic subunit 1.
-!- CATALYTIC ACTIVITY: 4 ferrocytochrome c + O(2) = 4 ferricytochrome

                                                                                                                                                                     Electron transport; Respiratory chain.

DOMAIN 1 39 MITOCHONDRIAL INTERMEMBRANE (POTENTIAL).
SIMILARITY: Belongs to the cytochrome c oxidase subunit 2 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              MITOCHONDRIAL INTERMEMBRANE (POTENTIAL).

                                                                                                                                                                                                                                                                  subunit. Forms a tight complex
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                        -1- SUBUNIT: Part of the 30S ribosomal subunit. Forms a tight cowith proteins 510 and 514 (By similarity).
-1- SIMILARITY: Belongs to the 53P family of ribosomal proteins.
-1- SIMILARITY: Contains 1 KH type-2 domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ..

Cell. Brobes 16:197-208(2002).
-! FUNCTION: Binds the lower part of the 30S subunit head. Binds mRNA in the 70S ribosome, positioning it for translation (By
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       -!- SUBUNIT: Part of the 30S ribosomal subunit. Forms a tight complex with proteins 310 and 314 (By similarity).

with Approximation of the S3P family of ribosomal proteins.

-!- SIMILARITY: Belongs to the S3P family of ribosomal proteins.

-!- SIMILARITY: Contains 1 KH type-2 domain.
              -!- SUBUNIT: Part of the 30S ribosomal subunit. Forms a tight complex with proteins S10 and S14 (By similarity).
-!- SIMILARITY: Belongs to the S3P family of ribosomal proteins.
-!- SIMILARITY: Contains 1 KH type-2 domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   .
